Iter162 · Matched source-model qualification
2/2 complete paths · 134 scalar-verified states · one exposed source scene
A · Admitted selected paths, not the whole search tree
Retained route
Quantized / 24
Exact / 24
Model y (m)
Model x (m)
B · Progress and required checkpoint minima
Quantized / 24
Exact / 24
Completion threshold
Original route progress
Absolute model time (s)
Exact: model complete
25,441 attempts; 66 layers
Quantized: model complete
24,764 attempts; 66 layers
C · Full-population scalar replay at selected states
Quantized / 24
Exact / 24
Strict rejection above 100
Both paths: zero enclosed centers
at every selected state
Centers in sampled vehicle box
Absolute model time (s)
D · Grouping and width remain separate stages
Exact / 24
Quantized / 24
Clear candidate events at completed depths
Removed by grouping
Removed by width
Retained events
